"Lake to Lake: 12 Working As 1"

We'd like to personally welcome each of you to the 59th Annual OMFPOA Training & Educational Symposium. It's an exciting time for fire prevention as we continue to grow, remaining always adaptable, motivated and responsive to ensuring fire safety in our communities. We are all confronting a time of many changes and we're meeting these challenges during a time of larger province wide and national change. The world of fire prevention is an exciting area in which to work/study/play, and we'll continue to meet and bring inspired people together in forums like this, to ensure the OMFPOA remains at the forefront of fire prevention.

We'd like to thank each of you for attending the conference and bringing your expertise to our gathering. You, as leaders, have the vision, the knowledge and the experience to help us pave our way into the future. Throughout this conference, we ask you to stay engaged, keep us proactive and help us shape the future of fire prevention.

FIRE MONITORING OF CANADA INC.

With over 25 years of experience, Fire Monitoring of Canada Inc. (FMC) has established itself as a leader in the fire alarm monitoring industry. Specializing in the early notification of fire alarm signals to the Fire Department, FMC can provide the added benefit of electronically retransmitting your fire alarm signal directly to your participating Fire Departments using OPEN ACCESS™. As an Underwriters Laboratories of Canada (ULC) listed Signals Receiving Centre (SRC), we can provide a fire monitoring solution that is ideal for facilities such as hospitals, schools, high-rise residential units or any commercial and/or industrial building that is required to be monitored under the Fire Code.

- All products used are ULC compliant.
- FMC can install or connect to your existing ULC-listed fire alarm transmitter or sprinkler system.

OPEN ACCESS™

Where available, FMC will provide OPEN ACCESS™ fire alarm monitoring, which electronically retransmits fire alarm signals from your facility directly to participating Fire Departments. Monitoring in this fashion has been independently proven to save up to 2 minutes in Fire Department response time; time which is not insignificant when you consider that a fire doubles in size every minute after the first four minutes.

- Is available in participating communities.
- Takes a fire alarm signal once it reaches the automation system at the FMC SRC and electronically retransmits the signal directly into the Fire Department Computer Aided Dispatch (CAD) system.
- No special equipment required.
- Monitoring through OPEN ACCESS™ has been independently proven to save up to 2 minutes in Fire Department response times.

ULC CERTIFICATION

- FMC can provide CAN/ULC-S561 certificate issued by ULC, noting compliance with Building Code and Fire Code requirements for Fire Alarm Monitoring.
- The ULC certificate is the only physical proof that the monitoring being performed on site is compliant with the CAN/ULC-S561 standard.

TECHNICAL SUPPORT AND SERVICE

- FMC provides 24 hour/7 days a week/365 days a year technical response and customer service.
- In-house installation for all services.
- Annual fire monitoring transmitter inspection.
- CFAA certified technicians.

Shawn Simons and Alvaro Llanos

Shawn and Llanos will present their story **"After the Fire"**, a journey of two college roommates from Seton Hall University in New Jersey, who survived a horrific arson fire set by two classmates as a drunken prank. They will discuss their road to recovery and how they travel the world speaking to students in high schools and colleges as well as those in

the fire service about the importance of fire safety and prevention education on and off campuses. Visit their website at www.alvaroandshawn.com
